

**massAV is excited to announce our most recent acquisition:
FogScreen!**

It's as simple as it is stunning. Using nothing more than tap water and ultrasonic waves, FogScreen projection screen machines employ a patented technology to create a smooth foggy airflow that captures images just like a screen. You can walk right through a FogScreen projection screen without getting wet. The microscopic fog droplets actually feel dry to the touch, just like air.

The beauty of FogScreen projection screen is that anything you can see on a computer screen can now float in the air. Otherwise it's like any ordinary projection screen; installation couldn't be any easier. It works with still pictures, moving images and lasers.

The opportunity to create amazing buzz at your event is endless!

Check-out: www.fogscreen.com for exciting details, pictures and videos.
